Micro-abrasive tube brushes, abrasive filament

Micro-abrasive tube brushes, industrial quality, for internal finishing.

- High levels of flexibility and abrasion resistance
- Very low production tolerances
- Very suitable for use on already finished parts
- High deburring rates for comparatively low surface impact
- Can be used on manually operated machines as well as CNC machines and machining centres

Applications : Fine processing, mainly for application on non-ferrous metals, for deburring cross holes, control units, O-ring grooves and cylindrical components.
